

Yourui Shao

yourui@caltech.edu | github.com/iuruoy-shao | iuruoy-shao.github.io

Education

California Institute of Technology

GPA: 4.13

B.S. in Computer Science (Learning & Vision), minor in Neurobiology

Graduation 2028/29

- Courses: Machine Learning & Data Mining, Learning Systems, Computing Systems, Software Design in C, Linear Algebra, Multivariable Calculus, Differential Equations, Combinatorial Analysis

Experience

Undergraduate Researcher

Mar 2026 – Present

Caltech Rigorous Systems Research Group

- Optimizing multi-agent systems inference-time scaling of general problem-solving domains with information theory.
- Developed custom pipeline for domain-specific skills template generation & embeddings-based retrieval to create subdomain experts for math problem solving. Analyzing leverage and efficacy of template expertise.
- Designing & running experiments. Developed comprehensive evaluation modules for inference, template, & retrieval with ablationary baseline testing, template & expert contribution metrics, & LLM answer judging.

Researcher

Jun 2026 – Sep 2026

The Emotional Intelligence Company

- Technical lead in small pre-seed startup teaching AI models creativity and human emotion and interaction.
- Training autoencoders to learn personalized representations for individual character, behavior, and social dynamics.

Summer Undergraduate Research Fellow

Jun 2026 – Aug 2026

Stanford Neural Prosthetics Translational Lab

- Constructed hypotheses & experiments characterizing geometric structure of speech representations in the brain.
- Trained, perturbed, & interpreted task-driven RNN models as analogs to neural population activity. Tested effects of task settings and model parameters. Demonstrated weight decay effects on queue dynamics; emergence of grammar encoding as overlapping compressed word identities; and shared word → phoneme conversion subspace.
- Developed toolkit to characterize hidden state geometries with linear encoders/decoders, null-potent space decomposition, subspace overlap and trajectories, effective dimensionality, rotation and linearity of solutions, etc.

Projects

Relay (HackPrinceton 2025) | Python, LangChain, FastAPI, TypeScript, React

Nov 2025

- In 20 hours, built functioning full-stack, multi-agent AI web application to look up and cite, write articles, and notify users on state legislative activity with self-updating RAG system live scraping congressional sites.
- Developed conversational agent with custom source retrieval tooling and adaptive to user interest and reading level.

Reinforcement Learning for *Fish* | Python, PyTorch

Jan 2025 – May 2025

- Taught RL to play *Fish*, a multiplayer, team-based card game. Built and optimized two-part convolutional LSTM hand prediction + Q-learning network in PyTorch inspired by human gameplay tactics. Handwrote all the code.
- Programmed custom state-action converter, data parser, self-play environment, data pipeline, & rewards.

Publications

Predicting College Admission Results with Machine Learning on Unstructured Online Data, 2024 IEEE FMLDS

John Tian, Yourui Shao

An Accurate Classification and Recommendation Method of Competitive Math Problems, 2024 IEEE BigDataService

Yourui Shao

Skills

- **Languages & Tools:** Python, DSPy, LangChain, CrewAI, FastAPI, Flask, PyTorch, TensorFlow, Numpy, Pandas, JavaScript, TypeScript, React, NodeJS, Vercel SDK, HTML/CSS, SQL (Postgres, MySQL, SQLite), git, Docker
- **Concepts:** Post-training, NLP, Transformers, RL, deep learning, multi-agent systems, REST APIs, full stack, databases
